

Crijn Bouman, CEO & Co-founder:

"After graduating from Delft, I founded Epyon, Europe's first EV fast-charging company, later acquired by ABB. Following the acquisition, I stayed on to build out a global business. In that position, I stumbled upon a company covertly developing AVs in a discrete test location. I realized I was watching the future of electric mobility. Yet, I also noticed a crucial element was missing. In response, in 2019, with my co-founders Joost and Kanter, I embarked on a new venture: Rocsys. We aim to create a hands-free and effortless automated charging experience. Rocsys is reimagining electric mobility by accelerating the integration of autonomous driving technology."

Rocsys is the global leader in hands-free charging solutions for electric vehicles. The company's cutting-edge technology, including next generation soft robotics, AI-driven computer vision, and data-driven services, unlocks greater efficiency, safety, seamlessness, sustainability and scalability for the world's leading ports operators, logistics companies and automotive brands. With operations in Europe and the United States, Rocsys plays a leading role in shaping standards that will unify a powerful EV ecosystem through industry consortiums and strategic partnerships with multinational corporations and OEMs.
